

Data Centers Canada chooses BioFortress for their new physical access control system

Data Center Canada selects Bio-Metrica's BioFortress to make it easier for them to track and control both access to their facilities and sensitive systems.

Orlando, FL April 14, 2010 – Data Centers Canada (DCC), a data center provider, which operates, develops and manages Canadian real estate for the purpose of providing turn-key data center solutions including collocation and disaster recovery solutions for enterprises, has selected Bio-Metrica's BioFortress for their physical access control solution to protect both their facility and their private collocation cages.

After BioFortress' installation, DCC was able to strengthen security to their facility entrance by adding a three tier physical challenge system utilizing Biometrics, PIN codes and Card Access. This same high security was also applied to their private collocation cages where clients house sensitive systems.

"We wanted to replace our existing system with one that would not only provide our facility with multi-factor secured entry, but also allow us to easily track whoever came in and out of any protected areas with one cohesive system. We're happy with the level of integration that BioFortress provides us," said Paul Di Benedetto, Managing Partner, Data Centers Canada.

BioFortress is a biometric access control system allowing reliable, secure and privacy-protected identification of users by their fingerprints, proximity cards and/or PIN codes and passwords. With biometrics, BioFortress ensures businesses that only authorized personnel are allowed into areas they require access to and that their identity is verified by the fingerprint of the user.

"With BioFortress, businesses can be assured unauthorized personnel won't be able to enter areas they should not be able to and easily track the access times of those who should have access. When fallibility and reliability of older systems come into question, BioFortress' use of biometrics ensures that their employees are indeed who they say they are," said Ronen Yacobi, CEO of Bio-Metrica, LLC.

About Bio-Metrica, LLC:

Headquartered in Altamonte Springs, Florida, USA, Bio-Metrica LLC is a system integrator of both turnkey and custom biometric authentication systems servicing clients all over the world. Founded by electrical engineers and equipped with the most updated know-how in the biometric field, Bio-Metrica provides cutting edge biometric solutions to government and corporate customers.
