## Enterprise Information Security IDenium

**IDenium** is a comprehensive biometric identification solution designed to manage access to the corporate information resources of an enterprise-wide network. This solution is designed to handle identification issues of any organization using a distributed enterprise network.

**IDenium** enhances your operating environment security mechanisms by way of implementing the cutting-edge fingerprint, and iris matching technology.

**IDenium** provides a set of features that provides companies the following advantages:

- Identification of users by unique biometric parameters, fingerprints and iris, which prevents sharing, theft or loss
- Ease and convenience of identifica-

tion: no need to memorize, type or change multiple passwords

- Quick integration into enterprise-wide networks
- Flexible and Centralized user management, via the standard AD Users and Computers console
- Dual or Triple Factor Authentication: Combinations of supports biometrics (fingerprint and iris) and smartcards or passwords can provide a higher level of security
- Thin Client Support: IDenium can also support thin desktop environments such as Citrix and Microsoft Terminals Services/Remote Desktop.

**IDenium** is ideal for companies who are looking to secure their networks against bad password practices among users as well as lowering their support costs for resetting passwords and dealing with unauthorized access.

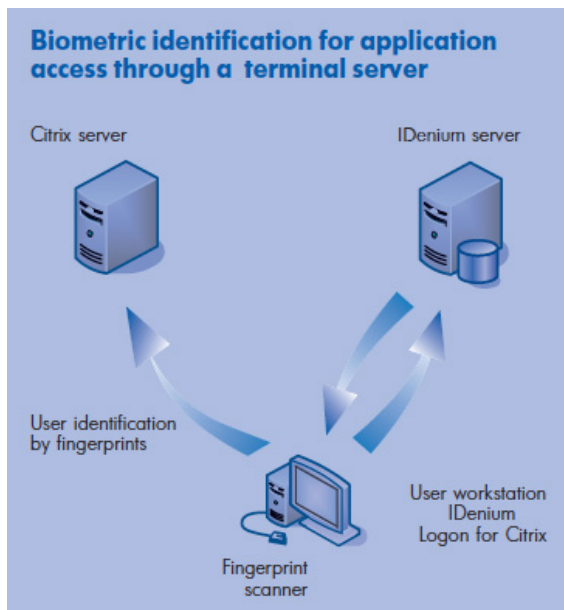

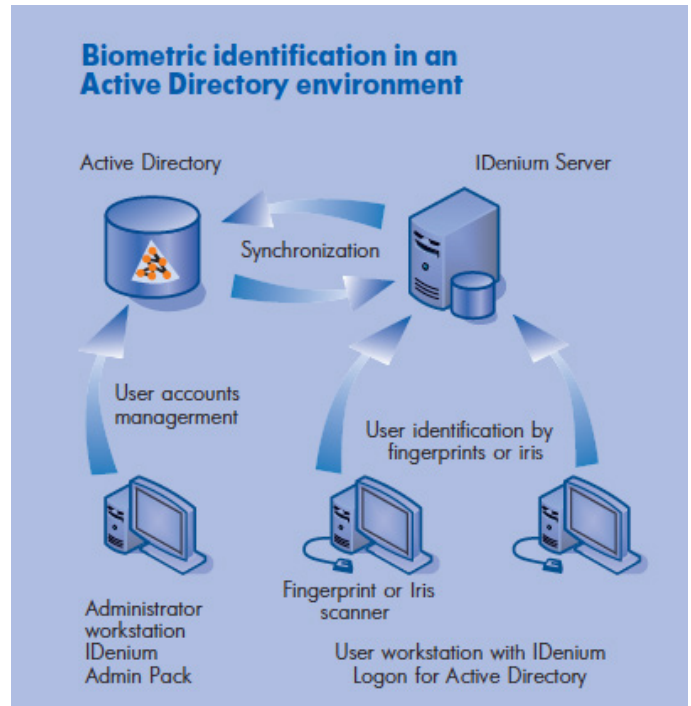

## Key Features of IDenium

### Overall Increase in Network Security

- A user is identified with the help of his/her own unique biometric credentials
- Non-repudiation of transactions confirmed by way of biometric identification
- Users cannot share passwords and access rights
- Prevention of use of stolen or lost identifiers

### Centralized and Streamlined Administration

- Reduction of time required to access protected resources (no mistakes typing or forgetting passwords, or damage, or loss, of identifiers)
- Reduction of costs related to administration of the network (reduced help desk costs for password resets, etc.)

### Ease of use

- One-time enrollment of biometric identifiers
- Quick authorization, user convenience and workflow efficiency

### Scalability

- Ability to create and extend clusters of biometric identification servers
- Load distribution and balancing
- Use of local cache data for user access in case of servers or network unavailability
